

WHAT IS CLAIMED IS:

1. A cover tape adapted to wind around a grip, said cover tape comprising:

an elongated cloth layer having a first surface and a second surface;
and

an elastic layer made of silicone gel and bonded to the first surface of said cloth layer for enabling the second surface of said cloth layer to be exposed to the outside when spirally winding the cover tape around the grip with said elastic layer adhered to the periphery of the grip.

2. The cover tape as defined in claim 1, wherein said elastic layer covering the whole area of said first surface of said cloth layer.

3. The cover tape as defined in claim 2, wherein said elastic layer has a rib extended along the direction of the longitudinal axis of said cloth layer and disposed at a middle portion of said elastic layer.

4. The cover tape as defined in claim 1, wherein said elastic layer covers a middle part of the first surface of said cloth and extends in direction along the longitudinal axis of said cloth layer.

5. The cover tape as defined in claim 1, wherein said elastic layer has a thickness about two times of the thickness of said cloth layer.
